1.Business Model

OCTAVE operates as an advanced analytics consulting and technical delivery hub. Its business model has evolved from internal value generation to external commercialization.

A. Operating Strategy: The "CoE" Evolution

- **Phase 1: Internal Value Capture (2018–2023):** Initially, OCTAVE operated purely as a captive service provider for the John Keells Group. Its model was based on generating indirect financial value (cost savings, operational efficiency, and revenue maximization) for JKH's internal subsidiaries rather than direct external billing. For example, they developed predictive models to forecast retail shelf-replenishment for Keells supermarkets and created machine-learning solutions to prevent policy lapses for Union Assurance.
- **Phase 2: B2B Commercialization (2024–Present):** Having proven its capabilities internally, OCTAVE's business model expanded to include external B2B (Business-to-Business) consulting. They now take on selective engagements outside the John Keells Group, monetizing their expertise by offering data solutions to third-party clients both locally and globally.

B. Value Proposition

OCTAVE's core proposition is translating raw, siloed data into actionable business interventions that drive real-world impact. They do not just provide data software; they combine data engineering, machine learning, and human business strategy to solve sector-specific challenges.

C. Key Offerings & Revenue Streams

Whether serving internal business units or external clients, OCTAVE's service portfolio includes:

- **Immersive Data Platform Assessments:** Consulting services that audit a client's existing data infrastructure and recommend architecture to prepare them for advanced analytics.
- **Leadership Visibility Platforms:** Building end-to-end data pipelines that feed into real-time C-suite dashboards for high-level strategic decision-making.
- **Bespoke Predictive Analytics (Use Cases):** Developing custom algorithms for specific industry problems, such as customer segmentation, churn prediction, supply chain optimization, and cost-reduction modeling (e.g., "Cost Sherlock").

D. Technology & Resource Model

- **Talent Density:** The business relies heavily on highly skilled human capital, operating cross-functional teams that include Data Engineers, Data Scientists, Visualization Analysts, and Business Domain Experts.
- **Cloud & Tech Infrastructure:** OCTAVE leverages a modern, scalable technology stack, predominantly utilizing the Microsoft Azure ecosystem and Databricks. This infrastructure allows them to centralize massive datasets from siloed legacy systems across different industries (retail, leisure, finance) to train and deploy machine learning models efficiently.

2.Company Size & Classification: Large-Scale Enterprise (Captive CoE)

While OCTAVE might exhibit the agile, innovative, and flat-structured culture of a tech startup, **it is structurally and financially part of a large-scale enterprise.**

- **Classification:** OCTAVE is a specialized internal division (a Centre of Excellence) operating within a massive corporate framework.
- **Scale Context:** Its parent company, the John Keells Group, operates across seven distinct industry verticals (including retail, leisure, property, and financial services), employs over 14,000 people, and is heavily capitalized.
- **Verdict:** It cannot be classified as an independent startup or an SME (Small and Medium-sized Enterprise). It is a strategic corporate tech division embedded within a **large-scale corporate enterprise**, benefiting from corporate funding, vast proprietary datasets, and an established ecosystem.
